

# MONROE Liquid Application Trailer

## Ideal Pre-Storm Liquid Solution

Be proactive in road safety with our liquid application system. Treat pavement before the storm event to prevent the bond of ice to the road, more cost-effectively and with less environmental impact than granular material.

### FEATURES

900 - 6,500 gallon tank

Hydraulic or Engine Driven Pump

Pintle Hitch or Fifth Wheel Hookup

Variety of nozzle options for spray patterns

Multi-lane capabilities

### Safer than Granular

Get in front of black ice and keep your community moving. Pre-storm liquid application prevents the bond of ice to the road, keeping the public moving and protected.

### Environmentally Friendly

The reduction in granular material is better for the environment, and also more cost-effective. Increasing liquid solutions also reduce chlorides in water bodies and groundwater.

### Labor Saving

Due to residual adhesion to the pavement, teams can pre-treat during normal work hours and reduce overtime or emergency work hours.
