

# MONROE RDS

## Quick Changeover for All Season Use - Built Your Way

This live-bottom body works as a dump body and a spreader, using a chain conveyor or dual auger to quickly and cleanly move material. In winter, the RDS spreads salt or sand with improved material flow and reduces bridging. For warm weather, this easily converts to a standard dump body to tackle municipal road maintenance and more.

### FEATURES

Chain Conveyor Long Members Slotted Front And Rear For Drive Maintenance

Access In Top Rails for Routing Electrical Wires

Access To Tailgate Latch Linkage Through Rear Panels

Large Cutouts In Rear Panel For Easy Access To Gearboxes And Motors

Radius Side Wall Provides Better Flow Of Material

### Radius Sides

The radius side design allows the free flow of material and offers enhanced liquid capacity.

### Dump

This truck easily and quickly converts into a conventional dump body.

### Spread

Several material discharge and spinner locations tailored for your municipality.
