SAFETY INSTRUCTIONS

- Read all installation, safety and maintenance instructions completely before operating this equipment.
- Keep all personnel clear of moving parts while equipment is being operated.
- Do not operate equipment in need of maintenance! Repair immediately!
- While operating this equipment, use common sense, use caution, be alert and be safety-conscious.
- Do not race the engine while unloading.
- **Before installation of this V-Box, or maintenance to V-Box or truck, apply the parking brake, chock the rear wheels and remove the key from the ignition switch.**
- **Do not enter hopper while engine is running.**
- **Do not disable auger motor interlock, if present.**

! DANGER

AVOID HIGH-PRESSURE FLUIDS

Escaping fluid under pressure can penetrate the skin causing serious injury.

Avoid the hazard by relieving pressure before disconnecting hydraulic or other lines. Tighten all connections before applying pressure.

Search for leaks with a piece of cardboard. Protect hands and body from high pressure fluids.

If an accident occurs, see a doctor immediately. Any fluid injected into the skin must be surgically removed within a few hours or gangrene may result.

MAINTENANCE INSTRUCTIONS

CAUTION: Always replace shields and covers when maintenance is complete.

- Allow hydraulic system to warm up before using.
- Maintain a ¾ full reservoir using high grade non-foaming oil.
- Avoid getting contaminants in reservoir when filling.
- Replace filter cartridge with new cartridge at least twice a year and more often if necessary.
- Clean quick disconnects before taking apart or connecting.
- Lubricate all fittings on a regular basis. Refer to chart below.
- The grease fittings are located as follows:
 Auger Bearing1 fitting
 Rear Gate Jack2 fittings

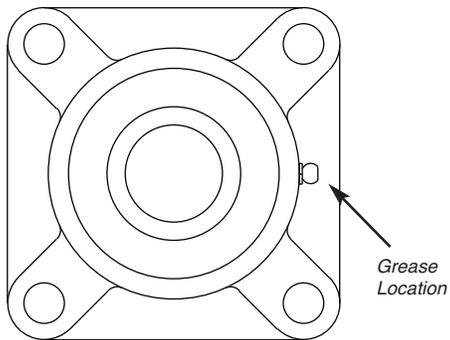

Continued on the following page...

LUBRICATION

All bearing units are factory prelubricated and, therefore, do not require supplemental grease before service life begins. Relubrication, when administered correctly, can increase the life of a bearing substantially. We recommend the following general guidelines to maximize your bearing life:

RPM	Temperature	Environmental Condition	Interval
100 500 1,000	32°F-120°F 32°F-150°F 32°F-210°F	Clean Clean Clean	6-12 months 2-6 months 2 wks to 2 months
1,500 Any	Over 210°F 32°F-150°F	Clean Dirty	Daily to weekly Weekly to monthly
Any Any	Over 150°F Any Temp.	Dirty Very Dirty	Daily to 2 wks Daily to weekly
Any	Any Temp.	Extremely Dirty	Daily to weekly

BEARING, 4-BOLT FLANGE

NOTE:
 Over lubrication is a major cause of bearing failures. Please relubricate conservatively when unsure of bearing requirements.
 When selecting a bearing lubricant, your dealer suggest any lithium-based NLGI #2 grease. For operating temperatures higher than 210°F, please consult your dealer.

MAINTENANCE INSTRUCTIONS

Continued from previous page...

- Protect quick disconnects after taking apart with oily rag or other suitable protection.
- All bearings require periodic greasing and more frequent greasing during periods of greater use.
- Greasing pump shaft u-joints and slip end of pump shaft is recommended with each truck lubrication.
- Rinsing down and cleaning spreader after each use, and repainting or oiling after each season, will greatly prolong spreader life.
- Spreader trough or hopper should be kept empty between use to prevent materials from freezing around conveyor (or roll) in severe cold weather.

HYDRAULIC TROUBLE SHOOTING CHART

<p>CONDITION 1 Pump cavitation recognized by excessive noise.</p> <p>CAUSE</p> <ul style="list-style-type: none"> • Air entering system through suction lines. • Suction line kinked, twisted or too long. • Inadequate size suction line. • Oil too heavy. • Excessive pump speed. Normal pump speed 1200 to 1500 RPM. <p>CORRECTION</p> <ul style="list-style-type: none"> • Check line from reservoir for possible leaks. • Install suction line as short and straight as possible. • Increase suction line size. • Drain and replace with a low viscosity non-detergent oil. • Pump capacity is 16 GPM at 1000 RPM. Decrease PTO speed accordingly. 	<p>CONDITION 2 Erratic operation of conveyor and/or spinner.</p> <p>CAUSE</p> <ul style="list-style-type: none"> • Low oil. • Worn or defective motor. • Dirty, worn or defective flow control valve. • Plugged filter. • Relief valve setting too low. • Pump cavitation. • Air vent on reservoir tank is blocked. <p>CORRECTION</p> <ul style="list-style-type: none"> • Fill reservoir to a $\frac{3}{4}$ full level. • Repair or replace motor. • Clean, repair or replace flow control. • Replace filter element and clean filter. • Adjust relief valve for 1500 PSI. • Refer to pump section. • Clean or replace vent cap to admit atmospheric pressure to inside of the tank.
<p>CONDITION 3 Slow operation of conveyor and/or spinner.</p> <p>CAUSE</p> <ul style="list-style-type: none"> • Worn or defective pump. • Worn or defective motor. • Pump cavitation. • Insufficient pump speed. <p>CORRECTION</p> <ul style="list-style-type: none"> • Repair or replace pump. • Repair or replace motor. • Refer to pump section. • Pump capacity is 16 GPM at 1000 RPM. INSTALLATION INSTRUCTIONS

PERMANENT CHASSIS MOUNT

1. Hardwood wear strips usually 1 x 3 (not furnished) must be fitted to the truck chassis.
2. The V-Box should be positioned on the wooden wear strips so that a distance of approximately 6" be left between the truck cab and the front of the V-Box. This will help facilitate any future servicing of the conveyor chain.
3. Parts of some side gussets may have to be cut out to clear the truck tires.
4. Hardware kits for permanent mount V-Boxes are used to attach the V-Box to the truck chassis.
5. **DO NOT** weld mounting angles to the truck frame. Doing so can cause fatigue-cracking of the truck frame. **DO NOT** drill holes in frame flanges.

SLIP-IN V-BOXES

1. Remove and store the dump box tailgate.
2. Place the V-Box in the dump body and push as far forward as possible. Longmembers must overhang the rear by approximately 22". If the dump body is not flat, it is suggested that the V-Box be placed on two 1 x 6 hardwood boards. This will help to evenly distribute the weight of the loaded V-Box on all of the cross channels.
3. The spinner assembly is slid into place on the rear of the spreader. The top flanges of the spinner extension box rest on top of the bottom flanges of the spreader main and can be slid into place. Use the two pins attached to the rear enclosure to attach spinner to the v-box.
4. The four optional tie-down bolts are hooked into the holes in the body side gussets (two on each side). The tie-down clips are slipped under the rail of the dump box and the nut and jam nut tightened.

NOTE: If swing-up spinner is used, longmembers must overhang rear of dump body a minimum of approximately 22".

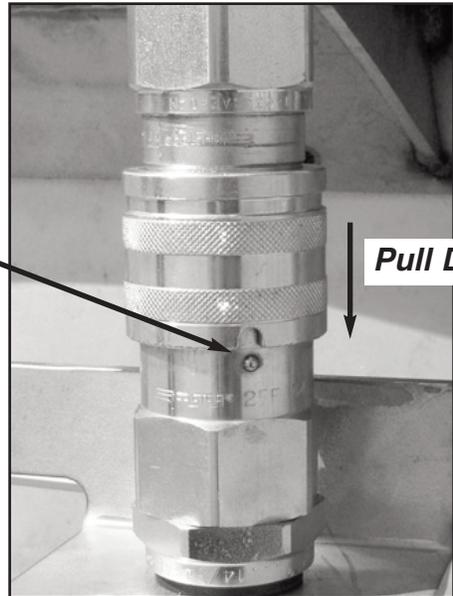

HYDRAULIC INTERLOCK SHUTOFF

1. Interlock shown engaged to stop top screens from opening during operation.

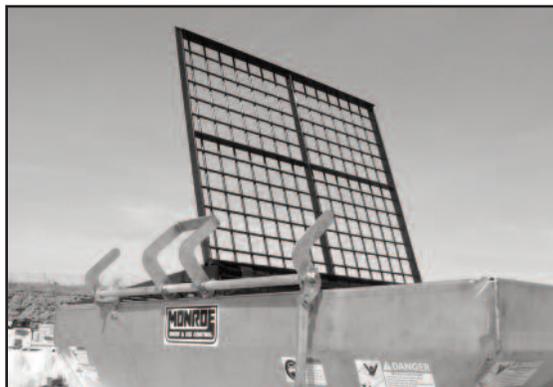

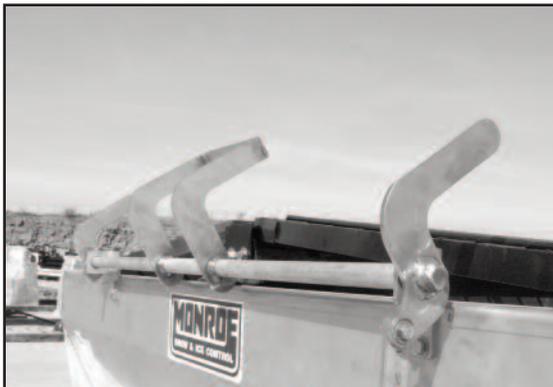

2. Align pin and notch.

3. Pull Collar down to disconnect.

4. Disconnect Hydraulics

NOTE: Never attempt to engage while top screens are open

Interlock disengaged to allow top screens to open

OPERATING INSTRUCTIONS

CAUTION:

- When starting up new equipment, be sure everyone is standing clear, watch for anything that may require shutting system down.
- Be sure lever on valve is moved completely to OFF position before working in or around spreading equipment.

INITIAL START UP:

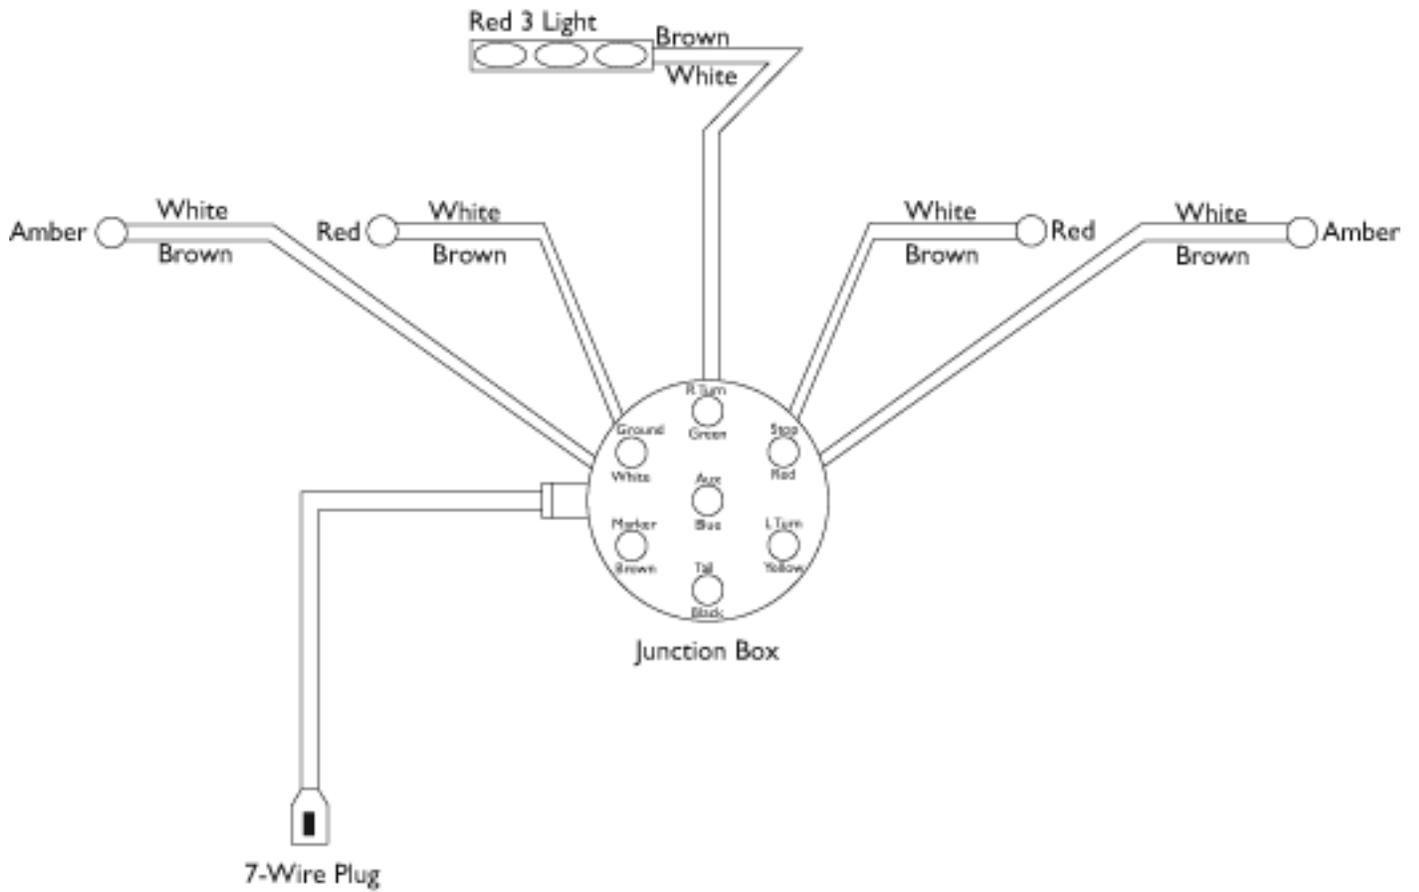

1. Fill reservoir about $\frac{3}{4}$ full with high-grade non-foaming hydraulic oil. KEEP OIL CLEAN!
2. Move valve on-off lever to OFF position.
3. Open conveyor and spinner knobs on valve.
4. Engage PTO and allow hydraulic oil to circulate until warm (70-80 degrees F).
5. Move valve on-off lever to ON position.
6. Check entire hydraulic system for leaks.
7. Examine conveyor and spinner to see if they are running in right direction.
8. Fill reservoir to $\frac{3}{4}$ full.
9. Hydraulic system is ready for use.

SPREADER OPERATION:

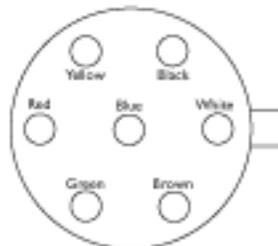

1. Start truck engine and allow hydraulic system to warm up by shutting off spinner and conveyor knobs and moving on-off lever to ON position.
2. Turning the knob marked "spinner" counter-clockwise will increase the spinner speed and width of spread.
3. Turning the knob marked "conveyor" counter-clockwise will increase the conveyor speed and thus the amount of material spread.
4. The gate on the rear of the box will also allow more material to pass to the spinner when opened wider.
5. The spread pattern can be controlled by rotating the entire spinner chute assembly 180°. If the material is dropped on the front of the disc it will be spread behind and to the right of the truck. If material is dropped on the rear of the disc it will be spread behind and to the left of the truck. The baffles inside the assembly will also further control the pattern left to right. Experimenting with the different positions will help to adjust the spread pattern as desired.
6. The control valve may be turned on and off or adjusted while truck is in motion.
7. Spinner and conveyor may be stopped at the same time without changing their valve settings by moving the on-off lever to OFF position.

DT Series Motors (Motor with Case Drain)

Pressurizing port "B" results in a clockwise shaft rotation as viewed from the shaft end

Drain line ("D") must be routed back to tank

Case Drain Important Information:

- All external case drains on motors must have a dedicated return hose to the oil tank.
 - Hose size must be as directed by the motor manufacturer.
 - Return connection (port) at tank should be just below normal oil level in tank.
 - Multiple case drains can be Tee'd into one port on an oil tank if done at the tank port.
 - The case drain circuit should not have a filter installed. If a filter is placed in the case drain circuit, the filter rating must be no less than 125 microns.
 - Maximum allowable peak backpressure on a case drain circuit is 15psig.
- √ The oil return hose on a motor with internal case drain shall be a dedicated circuit back to tank and not combined with other return circuits.
- Motors with internal case drains must not be connected in series.

V-BOX SPECIFICATIONS

A standard MSV V-Box (Brute Model) includes:

- Replaceable chain covers
- A tip-up chute assembly
- $\frac{3}{8}$ " thick flites on the conveyor chain
- 2" drive and idler shafts and bearings

A standard MV V-box (Performer Model) includes:

- Formed chain covers
- A bolt-on chute assembly
- $\frac{1}{4}$ " thick flites on conveyor chain
- $1\frac{1}{2}$ " drive and idler shafts and bearings

Both models typically have:

- 7 GA longmembers and floors, or troughs
- 10 GA hopper and side gussets

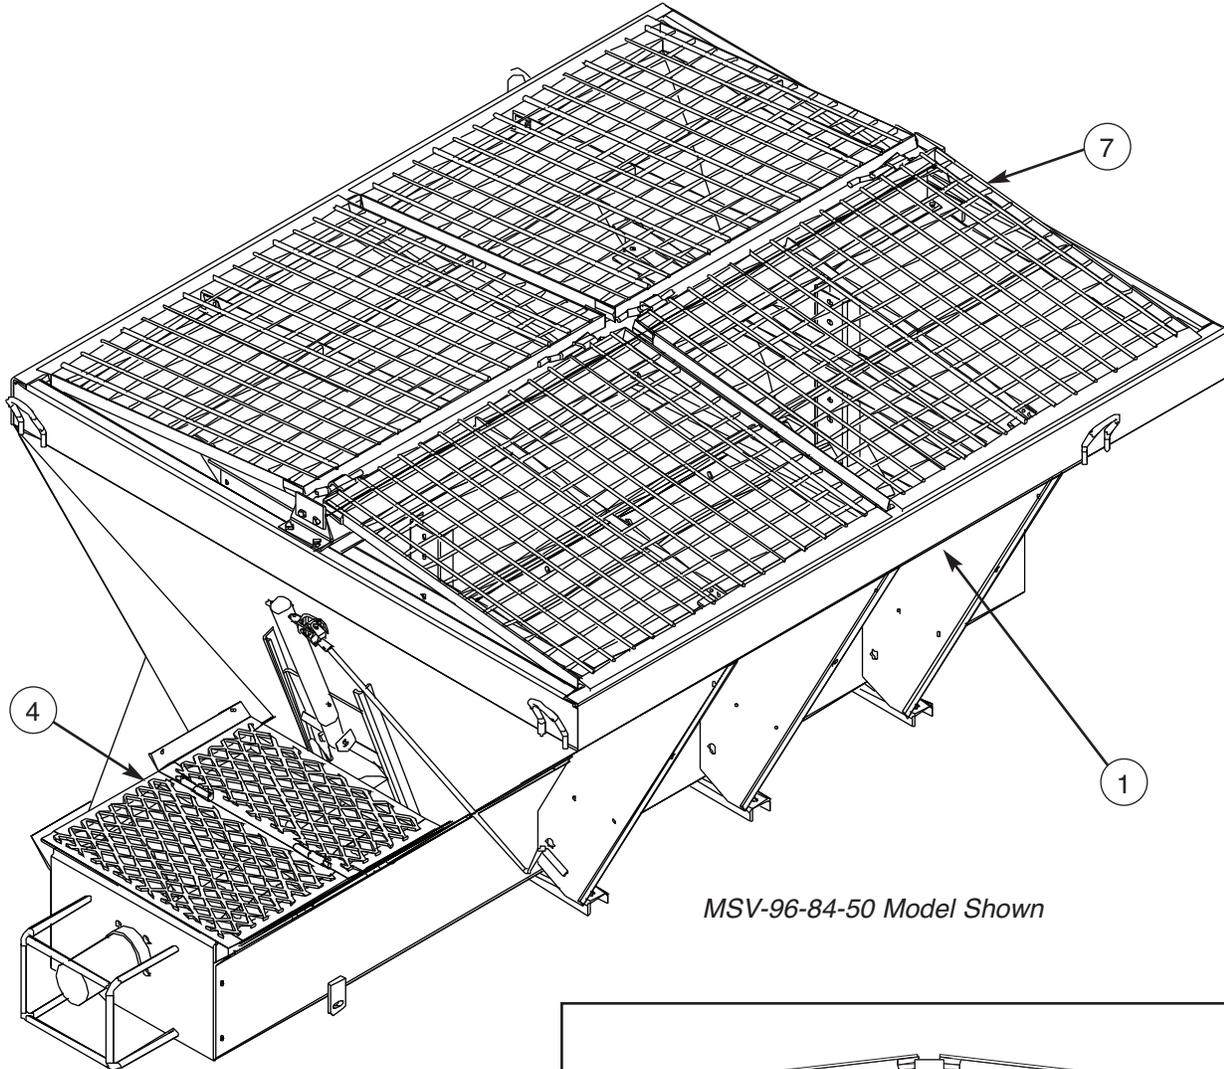

GENERAL INFORMATION

- All references to right or left pertain to the spreader as viewed from the rear of the truck, looking in the direction of travel.
- Delivery of replacement parts is subject to our sales delivery terms.
- Use only **Monroe Truck Equipment** O.E.M. replacement parts. Failure to do so will void warranty.
- Replacement parts in this manual reflect our most common spreader items. If you do not find the part you require, please call your distributor.
- **Monroe Truck Equipment** reserves the right to make revisions or alterations to this parts manual.

INSTALLATION OPTION - A

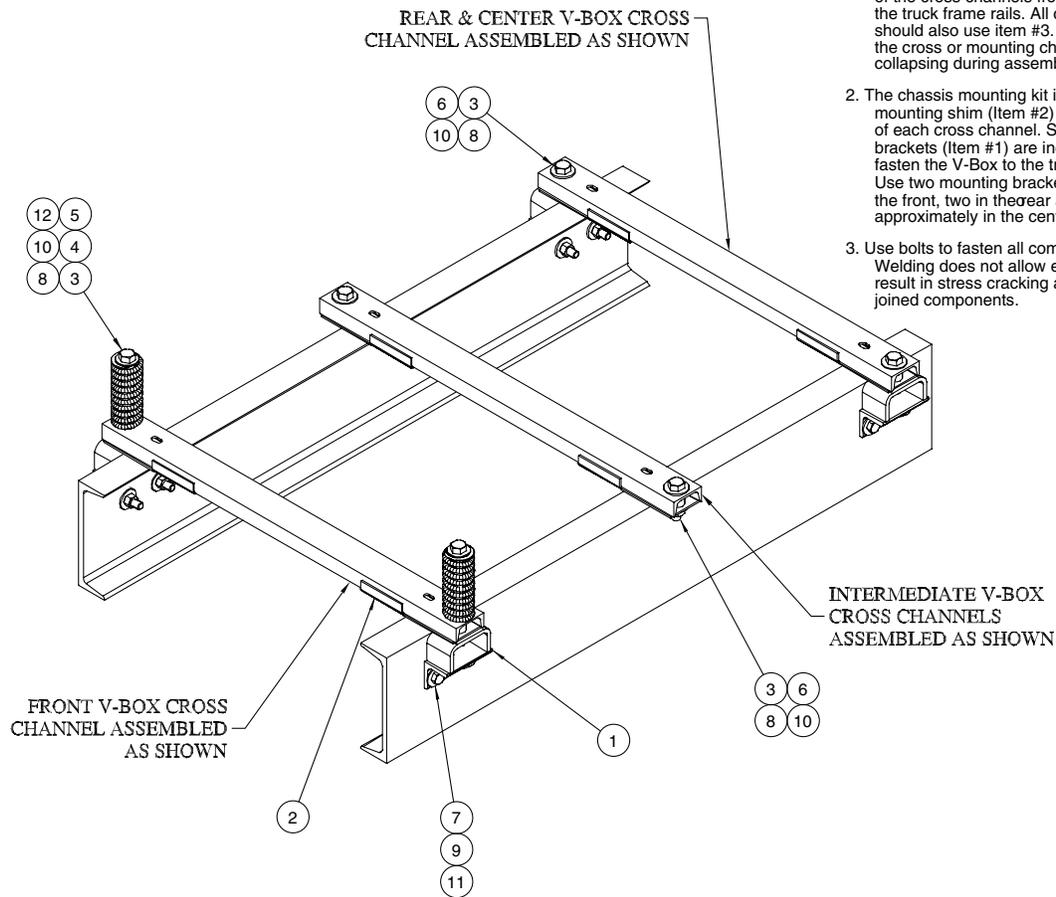

INSTALLATION OPTION - B

1. When installing a chassis mount V-Box all cross channels should be supported using item # 3. This will keep the sharp edges of the cross channels from wearing into the truck frame rails. All cross channels should also use item # 9. This will keep the cross or mounting channel from collapsing during assembly.
2. The chassis mounting kit includes one mounting channel (item # 3) for each end of each cross channel. Four mounting brackets (item #1 & #2) are included to fasten the V-Box to the truck frame rails. Use two mounting brackets in the front and two in the rear.
3. Use bolts to fasten all components together. Welding does not allow enough flex, this will result in stress cracking and failure of joined components.
4. Mounting kit may be installed with the mounting brackets on top of the v-box cross channels as shown in OPTION - A or under the cross channels as shown in OPTION -B, depending on the installation requirements.

1. When installing a chassis mount V-Box all cross channels should be supported using item #2. This will keep the sharp edges of the cross channels from wearing into the truck frame rails. All cross channels should also use item #3. This will keep the cross or mounting channel from collapsing during assembly.
2. The chassis mounting kit includes one mounting shim (Item #2) for each end of each cross channel. Six mounting brackets (Item #1) are included to fasten the V-Box to the truck frame rails. Use two mounting brackets with springs in the front, two in the rear and two approximately in the center of the body.
3. Use bolts to fasten all components together. Welding does not allow enough flex, this will result in stress cracking and failure of joined components.

1. When installing a V-BOX on a SWAP LOADER FRAME using this mounting kit, all cross channels should be supported using item #2. This will keep the sharp edges of the cross channels from wearing into the loader frame rails. All cross channels should also use item #3, this will keep the cross and mounting channels from collapsing during assembly
2. This mounting kit includes one shim plate, spacer (item #2) for each end of each cross channel. Six mounting brackets (item #1) are included to fasten the V-BOX to the loader frame rails. Use two mounting brackets in front, two in the rear and two approximately in the center of the body.
3. Position V-BOX on loader frame to determine location for mounting brackets. Weld mounting brackets to loader frame rails and attach V-BOX to brackets using 3/4" bolts. mounting brackets may need to be trimmed to fit.

MONROE TRUCK EQUIPMENT, INC. WARRANTY SNOW & ICE CONTROL PRODUCTS

Monroe Truck Equipment, Inc. warrants to the original purchaser, that if any part of the product proves to be defective in workmanship or material within **ONE YEAR** of the original installation, and is returned to us within 30 days of the discovered defect, we will (at our option) repair or replace the defective part. This warranty does not apply to damage resulting from misuse, neglect, accident, improper installation, normal wear items or lack of maintenance. This warranty is exclusive and supersedes all other warranties, whether expressed or implied. **Monroe Truck Equipment, Inc.** neither assumes, nor authorizes anyone to assume for it, any other obligation or liability in connection with this warranty and will not be liable for consequential damages.

All engines, pumps, motors, cylinders and valves are warranted by their manufacturer and not by **Monroe Truck Equipment, Inc.**. The manufacturer's warranty will apply to these parts. Electrical and hydraulic components are not to be disassembled without the express written permission of Monroe Truck Equipment. Use of replacement parts other than original equipment voids this warranty.

All defective parts returned must be accompanied by the model number, serial number, date installed, date of defect, description of defect, and the name of the distributor from whom it was purchased. All warranty claims must have prior written approval from **Monroe Truck Equipment, Inc.**

Please return the warranty registration card that accompanies this manual to confirm receipt of this parts catalog and acknowledge the information contained within. Failure to return the attached card may result in a voided warranty.

Warranty Policy

Uninstalled Parts and Equipment Provided by Monroe Truck Equipment

Monroe Truck Equipment will provide the following limited warranty for a period of one year to the original purchaser of all uninstalled goods provided by Monroe Truck Equipment:

LIMITED WARRANTY: All goods provided by Monroe Truck Equipment (MTE) will be free from defects in material and workmanship for a period of one year from the date of purchase by the original purchaser. This limited warranty shall be the sole and exclusive remedy for any such product found to be defective. This limited warranty supercedes all previous warranties and is exclusive and in lieu of all other warranties, whether expressed or implied.

This limited warranty applies only to parts or accessories manufactured by MTE and/or provided by same. Except with respect to title, this limited warranty does not pertain to parts or accessories not manufactured and/or provided by MTE, regardless of whether such parts or accessories were selected and/or recommended by MTE. MTE will, as a service to the buyer, pass on any warranties received from the original manufacturer of MTE provided parts and/or accessories.

MTE will not under any circumstances be liable for any incidental or consequential damages whether in tort, contract, or otherwise, for any bodily injury, death, property damage, loss of use, or loss of income resulting from or in any way arising out of any goods provided by MTE, or their sale, use, or manufacture.

Any warranty claim deemed to be arising from the result of misuse, abuse, neglect, accident, improper installation, lack of maintenance, act of war (whether declared or otherwise), or act of God will be denied. Any repair or modification by the buyer or any third party, without the prior written consent of MTE, will void any possible warranty compensation. Any damage deemed to be the result of abnormal operation will not be compensated by this warranty.

Normal or special maintenance items such as fuels, fluids, tires, belts, hoses, filters, air cleaners, light bulbs, and any other items subject to normal wear and tear that are supplied in connection with goods provided by MTE are not allowed under this warranty.

All engines, pumps, cylinders, valves, and motors are warranted by their manufacturer and not by Monroe Truck Equipment. The manufacturer's warranty will apply to these parts. Electrical and hydraulic components are not to be disassembled without the express written consent of MTE. Any disassembly of MTE provided components without prior authorization will void the applicable warranty.

Monroe Truck Equipment shall be the sole and final determining authority as it applies to the administration of this warranty policy. Purchaser acknowledges receipt of Monroe Truck Equipment Warranty Policy and agrees to be bound by same.

Any and all warranty claims must be forwarded to MTE within 10 days of defect discovery. A copy of the original Monroe Truck Equipment invoice as well as the manufacturer's model number, serial number, and date of installation must accompany all correspondence regarding said claims. MTE will, at their option, choose whether to repair or replace the defective part unless otherwise specified by the original manufacturer of said part.

Procedures for Warranty Claims Notification

For submission of any warranty claim please contact Monroe Truck Equipment – Warranty Department at 800-356-8134

The following documentation will be needed when you call for initial warranty authorization:

1. A copy of the original MTE invoice.
2. Make, Model, and VIN or Serial Number of the equipment involved.
3. Part number and serial number of the part in question.
4. A complete description of the problem.

The following must accompany any claim submitted to Monroe Truck Equipment:

1. Documented photographs of any physical damage.
2. Inspection notes by MTE personnel or MTE authorized 3rd party.
3. Authorization number issued by Monroe Truck Equipment – Warranty Department.

Defective parts must be returned to Monroe Truck Equipment (freight prepaid) within 30 days of issuance of Authorization Number.

Monroe Truck Equipment reserves the right to void any warranty for failure to comply with Monroe Truck Equipment Warranty Policy.

This policy is effective October 11, 2012
