## General Information

---

- Use only Monroe Truck Equipment O.E.M. replacement parts. Failure to do so will void the warranty.
- Location descriptions are noted in direction of travel (i.e. front, rear, left and right).
- Delivery of replacement parts is subject to our sales delivery terms.
- Replacement parts listed in this manual reflect the most common items for this product. If you do not find the part you require, please call your distributor.
- Monroe Truck Equipment reserves the right to make revisions or alterations to the parts manual at any time.

## How to Order Parts

---

To order or inquire about replacement parts, please contact the distributor or store that the product was purchased through. To speed the information flow, please have the following information available:

- Model Number
- Serial Number
- Part Number and/or Description of the Part
- Quantity Needed

For further information about Monroe Truck Equipment replacement parts, please call 877-834-9049.

## Return Policy

---

Merchandise returned to Monroe Truck Equipment must have a **Warranty Service Request (WSR)** form filled out completely and signed by authorized personnel.

To get your WSR form for whole goods, call Snow & Ice Sales at 800-880-0109.

To get your WSR form for replacement parts, call Dan Tuscan at 877-834-9049.

All returned items are subject to a 15% restocking fee and **must be sent freight pre-paid**.

# Safety Instructions

---

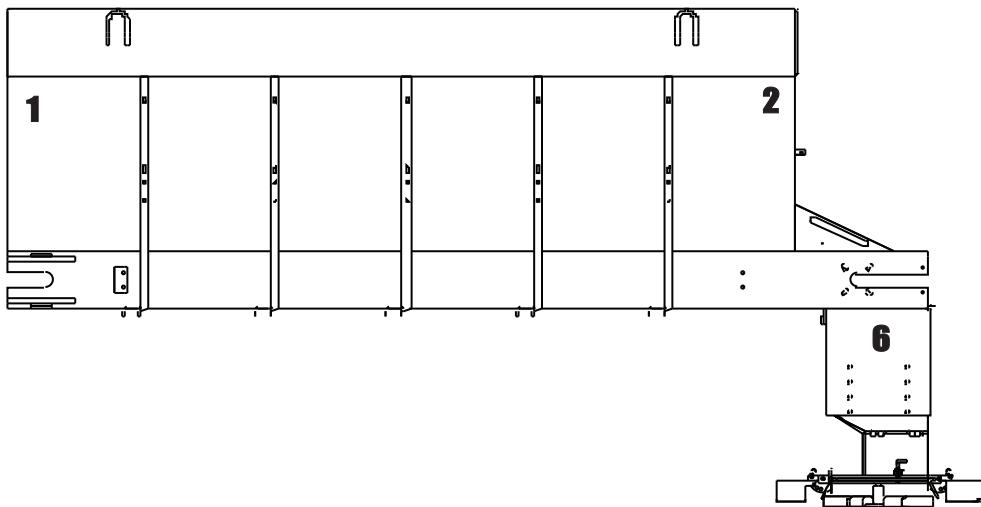

## !WARNING

*Before working under the vehicle or around the spreader, shut off the truck engine and remove the key from the ignition. Prevent accidental startup and operation of the spreader to avoid personal injury!*

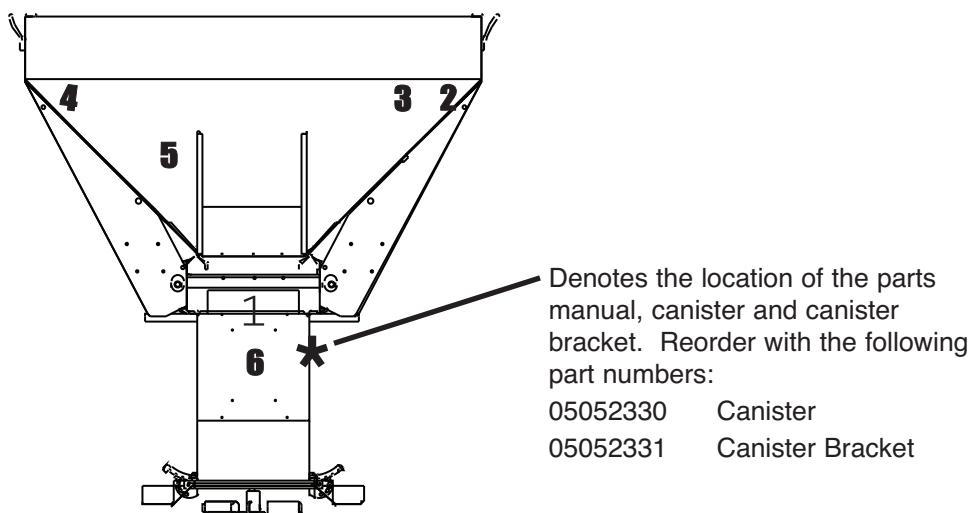

- Locate and read all safety decals on the unit before operating the equipment.  
Familiarize yourself with all potential hazards in operating this equipment.
- Read all installation, operation, and maintenance instructions before operating the equipment.
- Keep all provided shields, covers, and guards in place during operation of the unit.
- Stay away from moving chains, gears, and augers. Hands, feet, hair, and clothing can become entangled in moving parts, causing death or severe injury.
- Stay away from the spinner when it is rotating. The spinner can throw granular material with great force and can cause severe eye injury or blindness.
- Never enter the V-box unless the vehicle is turned off and the ignition key is removed. Follow lock-out/tag procedures for working on hazardous equipment.
- If the augers or conveyor jams or the granular material is frozen in the box, shut down and lock-out/tag the engine and hydraulic system, then clean out the box to free up the augers or conveyor.
- Watch for hydraulic fluid leaks at fittings and hoses. High-pressure fluid leaks can penetrate skin and cause severe injury.
- Do not climb on the V-box unless ladders or steps are provided, especially when the unit is wet or icy.
- If the V-box needs repair or the controls are not functioning properly, repair the unit immediately. Do not continue to operate a malfunctioning unit - further and more serious damage may occur.
- If the V-box is a slide-in or temporary mount unit, unload all material from the box before removing the box from the vehicle.
- Use the provided lifting loops to remove the box from a vehicle. If the spreader is a slide-in skid unit with legs, follow all instructions for removing the unit from the vehicle.
- When storing a slide-in or temporary mount V-box for summer, locate it away from high traffic areas and block it securely so it cannot fall or be pushed over.

## CAUTION

Use care when mounting or dismounting.

IF DEFACED-ORDER PART NO. 05051409

5

## CAUTION

1. Keep all guards/shields in place.
2. Make certain everyone is clear of machine before starting engine or operation.
3. Keep hands, feet and clothing away from power driven parts.
4. Disengage PTO, shut off hydraulic valve and set parking brake before leaving operator's position. Make sure all movement has stopped before servicing or unclogging machine.
5. Make sure machine is solidly supported when it is being mounted, dismounted or stored.
6. Use flashing lights when operating machine.

IF DEFACED - ORDER PART NO. 05051404

2

## DANGER

Moving conveyor/auger!

- Disconnect and lockout power before servicing, adjusting or cleaning.
- Keep hands, feet, hair and loose clothing away from moving parts at all times
- Never remove or modify guards or shields

*Failure to heed will result in **injury or death.***

IF DEFACED - ORDER PART NO. 05051406

3

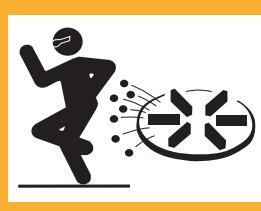

## WARNING

Flying debris.  
Stay clear and wear eye protection.  
Failure to heed will result in serious injury.

IF DEFACED - ORDER PART NO. 05051407

6

## WARNING

Turning spinners throw material.  
Stay clear & wear eye protection while spinner is turning.  
*Failure to heed will result in serious injury*

IF DEFACED - ORDER PART NO. 05051402

1

## DANGER

Moving conveyor!

- Disconnect and lockout power before servicing, adjusting or cleaning.
- Keep hands, feet, hair and loose clothing away from moving parts at all times
- Never remove or modify guards or shields

*Failure to heed will result in **injury or death.***

7

## DANGER

Keep all guards/shields in place.  
Moving parts can crush and dismember.

IF DEFACED - ORDER PART NO. 05052310

Should you ever need replacement decals or parts/maintenance manuals, simply contact MTE and we will supply you with them FREE OF CHARGE. See bill of material for safety decal replacement part numbers.

## Safety Decal Signal Words

DANGER (Red) indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

WARNING (Orange) indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

CAUTION (Yellow) indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury.

CAUTION (Yellow) used without the safety risk alert symbol indicates a potentially hazardous situation which, if not avoided, may result in property damage.

## !WARNING

*Before working under the vehicle or around the spreader, shut off the truck engine and remove the key from the ignition. Prevent accidental startup and operation of the spreader to avoid personal injury!*

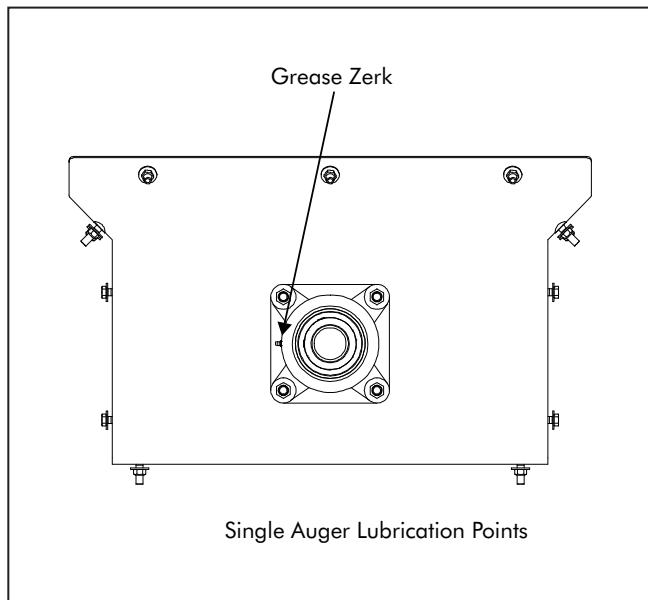

### In-Season

#### **Threaded Fasteners**

- Re-torque all fasteners after the first 8 hours of use.
- Check for loose, damaged, and missing fasteners before each use.
- Inspect and re-torque all fasteners at the beginning of each snow season.

#### **Grease Lubrication**

- Lubricate grease fittings every 10 hours during normal use and more often during heavy use.
- Do not over-grease sealed bearings. Grease should not be pushed out past the seals on these bearings. Refer to the greasing chart for sealed bearings.

- If the hydraulic pump has a PTO driveshaft, grease the U-joints and slip joint at the same time as the other fittings.

#### **Hydraulic System**

- Tighten all hydraulic fittings after the first 8 hours of use.
- Inspect hydraulic fittings for leaks every week and tighten as required. If a hydraulic fitting continues to leak after being tightened, replace the fitting as soon as possible.
- Maintain the hydraulic oil level at the upper black line on the reservoir sight gauge. Use a high-grade, non-foaming hydraulic oil. Do not mix different types and grades of oil.
- Keep dirt and other contaminants out of the reservoir. Pour oil through filter or screen when adding oil. Never operate the system with the filler cap not installed.
- Change the hydraulic oil annually or more often if it appears milky or discolored, or if it smells burned. If the oil needs to be changed frequently, investigate for a source of contamination or system overheating.
- Change the oil filter after the first 50 hours of operation, and then every 6 months or when the pressure differential gauge indicates the filter is plugging.
- When quick-disconnects are separated, cover and cap the ends to prevent the entry of contaminants into the hydraulic system and possible impact damage to the ends.
- Inspect the hydraulic hoses for wear or damage every month.

#### **Conveyor/Auger & Drive**

- If a drive gearbox has a vent, keep the vent open and unobstructed. A blocked vent can cause seal damage.
- Check the oil level in the gearbox once a month during the in-service period.
- Change gearbox lubricant annually or more often if the oil turns milky, indicating water contamination. Use SAE 80-90 gear oil or the oil specified by the gearbox manufacturer.
- The slack on conveyor chains must be checked after the first 8 continuous hours of operation and then weekly during the in-service period. If the distance from the center of the rear sprocket and the point where the chain contacts the lower flange on the long member is less than 30", the chains must be tightened. Tighten the chains until the tension springs are compressed to approximately 5".
- Apply anti-seize lubricant to the threads on the chain adjuster bolts annually.

## Routine Care

- Check the operation of the spreader before each use.
  - Verify that the material gate (hopper door) jack operates smoothly through its full range.
  - Verify that the conveyor runs smoothly and the spreader controller can vary the drive speed through its full range.
  - Verify that the spinner runs smoothly and the spreader controller can vary the drive speed through its full range.
  - Verify that the Blast function at the spreader controller is working properly (if applicable).
  - If the controller uses ground speed to control the conveyor speed, verify that this function is working properly.
  - Unless the vehicle is stored inside a heated building, empty the box of all granular material before parking the vehicle in freezing conditions. Wet or damp material will freeze solid inside the box, making the spreader unusable until it is thawed out.
  - At the end of each storm event, remove all material from the box, then pressure-wash the underside of the chassis and the spreader, especially all horizontal surfaces.
- Removing salt and other chemicals regularly will prolong the life of all components.

## Maintenance Schedule

- Due to the harsh operating conditions of a spreader, regular inspection and maintenance is critical to safe operation and durability of the spreader. The owner or end user must create and enforce the use of an inspection and maintenance schedule.

## Off Season

- Typically, the V-box spreader is removed from the vehicle and stored for the summer season.
- Remove all granular material from the box and pressure-wash it thoroughly to remove all dirt, salt, and other chemicals.
- When removing the V-box, use the supplied lifting eyes at the corners of the box (unless the V-box is a slide-in skid unit with legs).
- When hydraulic quick-disconnects are separated, cover and cap the ends to prevent the entry of contaminants into the hydraulic system and possible impact damage to the ends.
- Set the V-box on stable blocking to keep it off the ground. Remove the spinner assembly if required.
- Inspect the spreader closely for damage and make any required repairs immediately so that the spreader is ready to be reinstalled and used at the start of the next winter season.
- If possible, store the spreader indoors or under cover to reduce rusting and UV damage to hoses.
- Rust inhibitor may be applied to the chain, sprockets, and shafts to reduce rusting during storage.
- When reinstalling the spreader, replace any damaged fasteners and follow the fastener torqueing guidelines for in-season use.

1 1/4-7	380 FT-LBS	840 FT-LBS	1,360 FT-LBS

# Hydraulic Trouble Shooting Chart

## CONDITION 1

Pump cavitation recognized by excessive noise.

### CAUSE

- Air entering system through suction lines.
- Suction line kinked, twisted or too long.
- Inadequate size suction line.
- Oil too heavy.
- Excessive pump speed.

### CORRECTION

- Check line from reservoir for possible leaks.
- Install suction line as short and straight as possible.
- Increase suction line size.
- Drain and replace with a low viscosity non-detergent oil.
- Decrease PTO speed accordingly.

## CONDITION 2

Erratic operation of conveyor and/or spinner.

### CAUSE

- Low oil.
- Worn or defective motor.
- Dirty, worn or defective flow control valve.
- Plugged filter.
- Relief valve setting too low.
- Pump cavitation.
- Air vent on reservoir tank is blocked.

### CORRECTION

- Fill reservoir to a  $\frac{3}{4}$  full level.
- Repair or replace motor.\*
- Clean, repair or replace flow control.\*
- Replace filter element and clean filter.
- Adjust relief valve for 1500 PSI.
- Refer to pump section.
- Clean or replace vent cap to admit atmospheric pressure to inside of the tank.

## CONDITION 3

Slow operation of conveyor and/or spinner.

### CAUSE

- Worn or defective pump.
- Worn or defective motor.
- Pump cavitation.
- Insufficient pump speed.

### CORRECTION

- Repair or replace pump.\*
- Repair or replace motor.\*
- Refer to pump section.
- Increase PTO accordingly.

## CONDITION 4

Conveyor and/or spinner will not operate.

### CAUSE

- Quick disconnects are dirty, damaged, or improperly connected.
- Hose connections wrong.
- Foreign material in valve compensator.

### CORRECTION

- Clean or replace and properly connect.
- Refer to illustration.
- Remove compensator and clean.

# Installation Instructions

---

## PERMANENT CHASSIS MOUNT

1. Hardwood wear strips usually 1 x 3 (not furnished) must be fitted to the truck chassis.
2. The V-Box should be positioned on the wooden wear strips so that a distance of approximately 6" should be left between the truck cab and the front of the V-Box. This will help facilitate any future servicing of the conveyor chain.
3. Parts of some side gussets may have to be cut out to clear the truck tires.
4. Hardware kits for permanent mount V-Boxes are used to attach the V-Box to the truck chassis.
5. **DO NOT** weld mounting angles to the truck frame. Doing so can cause fatigue-cracking of the truck frame.

## SLIP-IN V-BOXES

1. Remove and store the dump box tailgate.
2. Place the V-Box in the dump body and push as far forward as possible. Longmembers must overhang the rear by approximately 22". If the dump body is not flat, it is suggested that the V-Box be placed on two 1 x 6 hardwood boards. This will help to evenly distribute the weight of the loaded V-Box on all of the cross channels.
3. The spinner assembly is slid into place on the rear of the spreader. The top flanges of the spinner extension box rest on top of the bottom flanges of the spreader main and can be slid into place. Use the 4 bolts to attach the spinner to the v-box.
4. The four **optional** tie-down bolts are hooked into the holes in the body side gussets (two on each side). The tie-down clips are slipped under the rail of the dump box or welded and the nut and jam nut tightened. An **optional** tailgate latch kit should also be installed.

**NOTE:** If swing-up spinner is used, longmembers must overhang rear of dump body a minimum of approximately 22".

# Operating Instructions

---

## **CAUTION:**

- When starting up new equipment, be sure everyone is standing clear, watch for anything that may require shutting system down.
- Be sure the On/Off control is completely to the OFF position before working in or around spreading equipment.

## **INITIAL START UP:**

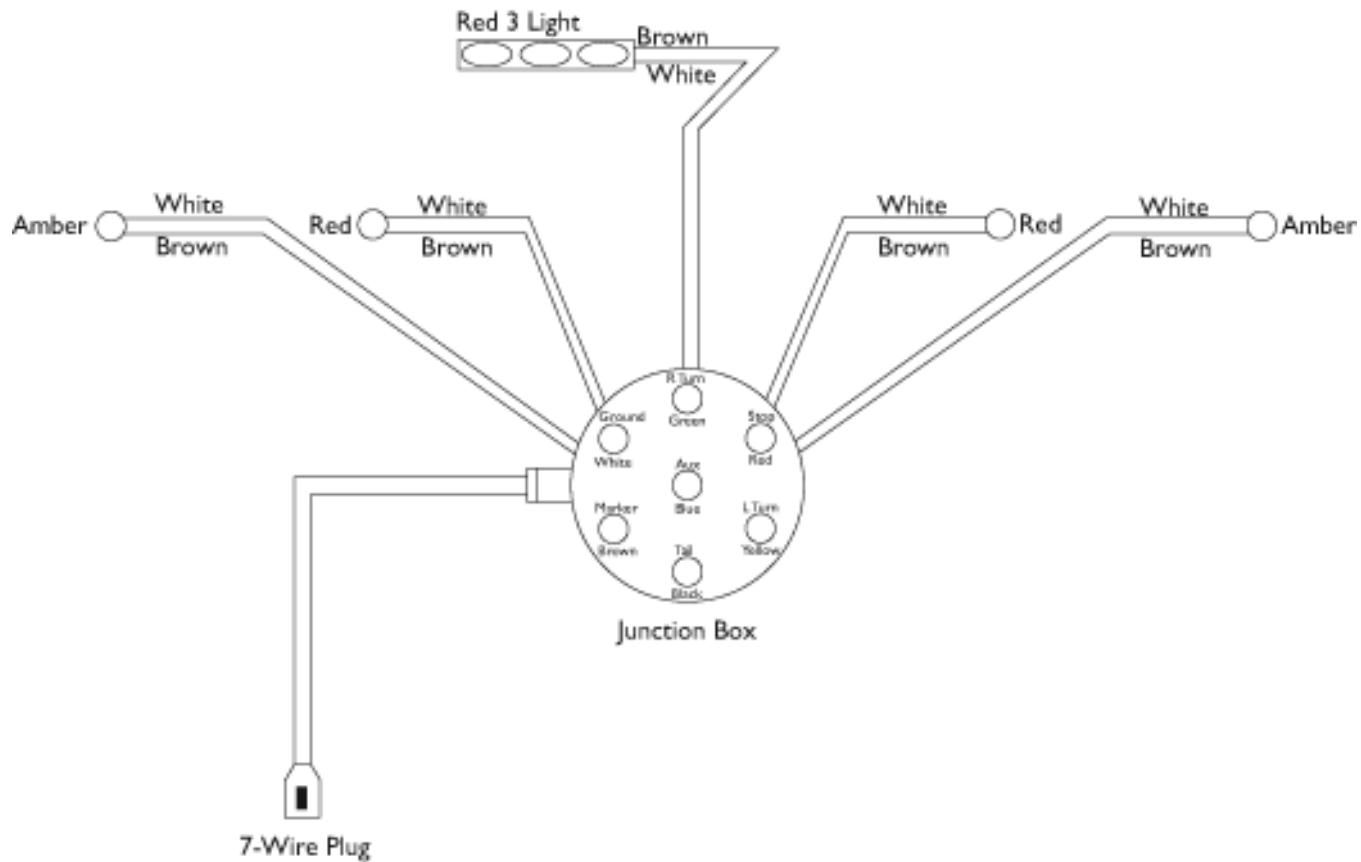

1. Fill reservoir about  $\frac{3}{4}$  full with high-grade non-foaming hydraulic oil. KEEP OIL CLEAN!
2. Move valve on-off control to OFF position.
3. Open conveyor and spinner control on valve.
4. Engage PTO and allow hydraulic oil to circulate several minutes to warm up.
5. Move valve on-off control to ON position.
6. Check entire hydraulic system for leaks.
7. Examine conveyor and spinner to see if they are running in right direction.
8. Fill reservoir to  $\frac{3}{4}$  full.
9. Hydraulic system is ready for use.

## **SPREADER OPERATION:**

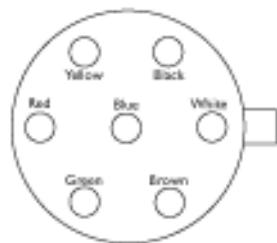

1. Start truck engine and allow hydraulic system to warm up by shutting off spinner and conveyor control and moving on-off control to ON position.
2. Operating the control marked "spinner" will increase the spinner speed and width of spread.
3. Operating the control marked "conveyor" will increase the conveyor speed and thus the amount of material spread.
4. The gate on the rear of the box will also allow more material to pass to the spinner when opened wider.
5. The spread pattern can be controlled by rotating the entire spinner chute assembly 180°. If the material is dropped on the front of the disc (**top mounted motor in front**) it will be spread behind and to the right of the truck. If material is dropped on the rear of the disc (**top mounted motor in rear**) it will be spread behind and to the left of the truck. The baffles inside the assembly will also further control the pattern left to right. Experimenting with the different positions will help to adjust the spread pattern as desired.
6. The control valve may be turned on and off or adjusted while truck is in motion.
7. Spinner and conveyor may be stopped at the same time without changing their valve settings by moving the on-off control to OFF position.

# Optional Wiring Schematic

Install the lights and connect the wiring using the diagram below.

# Hydraulic Schematics

## Single Auger Case Drain

### Proper Installation of Hydraulic Pump and Motor Case Drain:

External case drains on pumps or motors must be plumbed separately back to the oil tank. The case drain flow must enter the tank through a dedicated tank penetration; it must not pass through the return filter or tee into any other oil return circuit.

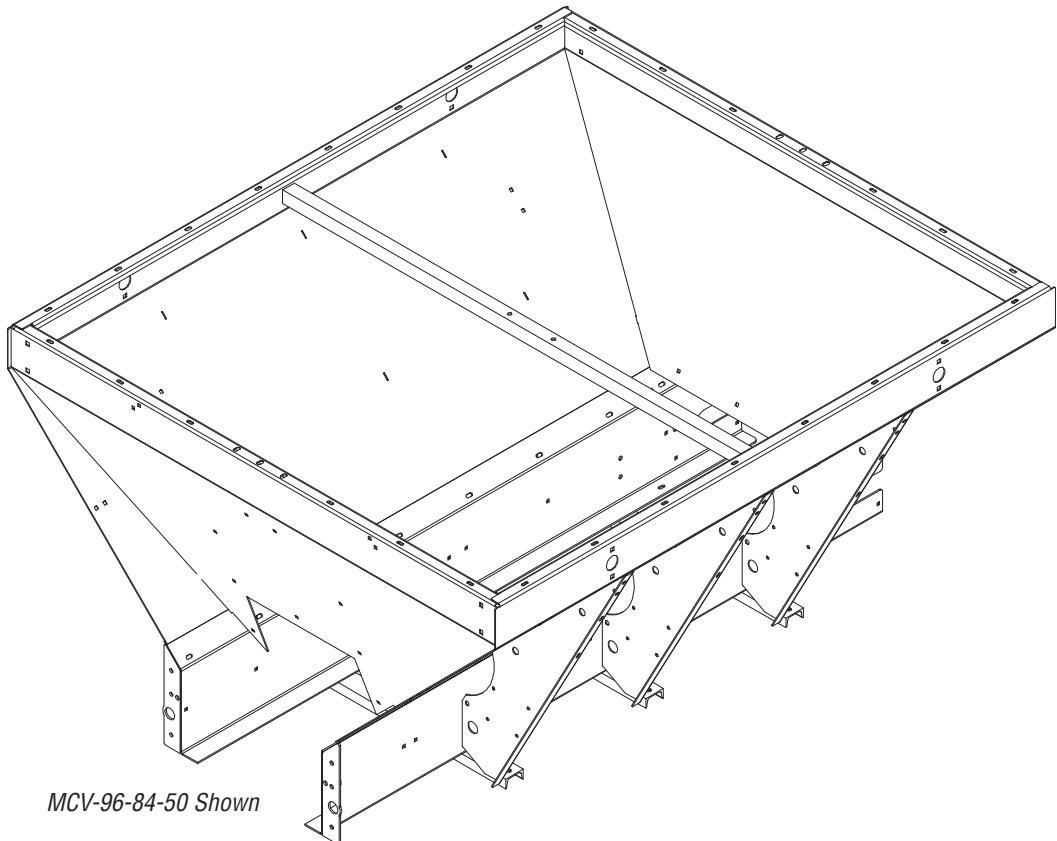

Case drain flows should not pass through the return filter due to the possibility of high differential pressure at the filter. High D/P when the hydraulic fluid is cold and/or due to poor maintenance of the filter can raise the return circuit pressure high enough to damage the pump/motor internals. (The lack of filtration of the case drain flow is not considered an issue due to the small volume passing through the pump or motor. If a filter is added to the case drain circuit, the filter element should be rated at no less than 125 micron.)

Ideally, the case drain penetration should be higher than the pump/motor case port and should be connected to a drop-pipe inside the reservoir that extends below minimum fluid level.

Design and detailing of a hydraulic system using pumps and/or motors with external case drains must include required oil tank penetrations, hose and labor for creating dedicated drain return circuits, and quick disconnects for the drain returns as required.

INSTALLATION OPTION - A

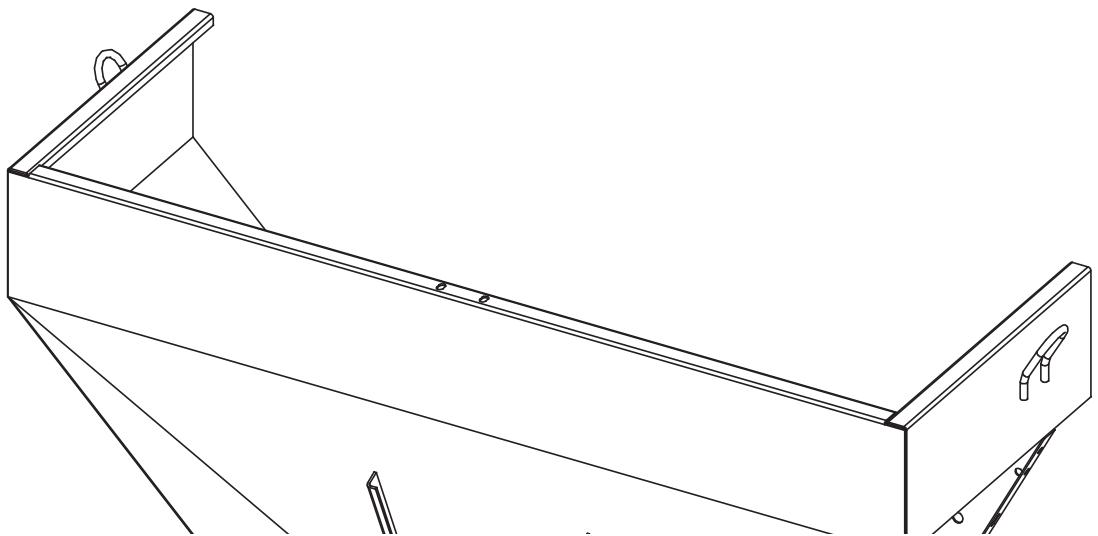

INSTALLATION OPTION - B

1. When installing a chassis mount V-Box all cross channels should be supported using item #3. This will keep the sharp edges of the cross channels from wearing into the truck frame rails. All cross channels should also use item #9. This will keep the cross or mounting channel from collapsing during assembly.
2. The chassis mounting kit includes one mounting channel (Item #3) for each end of each cross channel. Four mounting brackets (Item #1 & #2) are included to fasten the V-Box to the truck frame rails. Use two mounting brackets in the front and two in the rear.
3. Use bolts to fasten all components together. Welding does not allow enough flex, this will result in stress cracking and failure of joined components.
4. Mounting kit may be installed with the mounting brackets on top of the v-box cross channels as shown in OPTION - A or under the cross channels as shown in OPTION -B, depending on the installation requirements.

### Case Drain Important Instructions:

- All external case drains on motors must have a dedicated return hose to the oil tank.
- Hose size must be as directed by the motor manufacturer.
- Return connection (port) at tank should be just below normal oil level in tank.
- Multiple case drains can be T'd into one port on an oil tank if done at the tank port.
- The case drain circuit should not have a filter installed. If a filter is placed in the case drain circuit, the filter rating must be no less than 125 microns.
- Maximum allowable peak backpressure on a case drain circuit is 15psi
- The oil return hose on a motor with internal case drain shall be a dedicated circuit back to tank and not combined with other return circuits.
- Motors with internal case drains must not be connected in series.

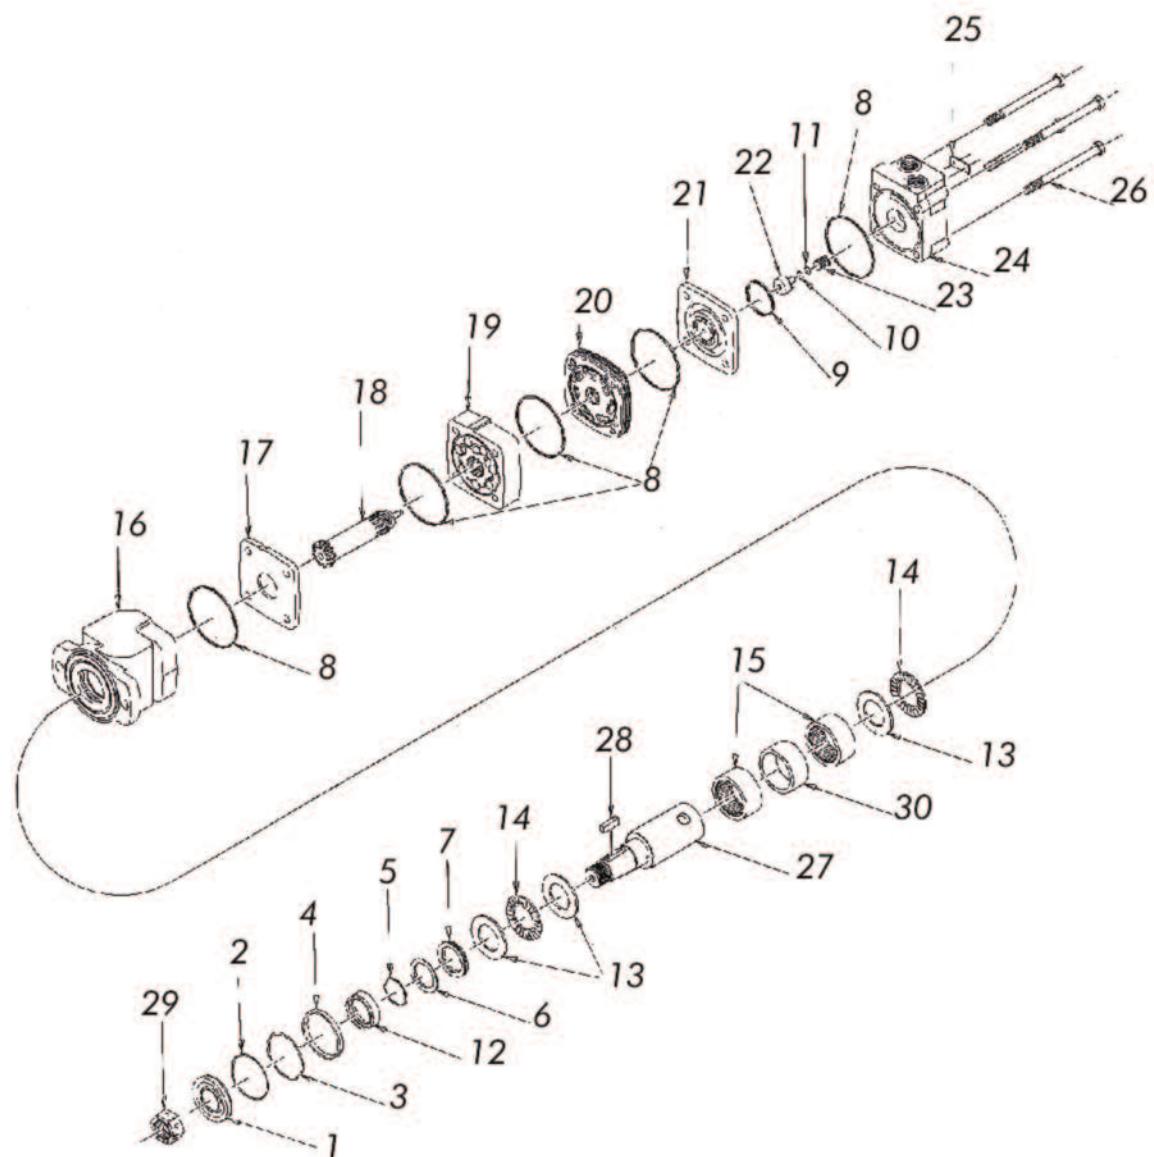

PRESSURIZING PORT "B" RESULTS IN A CLOCKWISE SHAFT ROTATION AS VIEWED FROM THE SHAFT END.

DRAIN LINE "D" MUST BE ROUTED BACK TO TANK.

## **Subject: Installing grease in White hydraulic motor sensor blocks**

### **Description:**

The sensor motor blocks that are installed between White hydraulic motors and gearboxes have an internal cavity that houses the pulse rotor on the motor shaft. This cavity is isolated from the motor and the gearbox, and the sensor components do not require any lubrication.

During the life of the motor and sensor block assembly, some moisture will work into the cavity and cause corrosion that can damage the sensor. Units disassembled in the field have been found to be severely corroded inside.

White provides a grease fitting on the sensor block to allow installation of grease for corrosion protection. The blocks must be filled with grease during initial installation and checked annually during operation. This Service Bulletin describes the proper method of installing grease in a sensor block.

### **Required Grease**

Sensor blocks must be filled only with dielectric (non-conductive) grease. The use of grease containing electrically-conductive materials (graphite, etc.) will cause errors in the sensor pickup signal to the cab controller.

### **Proper Method of Grease Installation**

The sensor pickup must be removed before grease is pumped into the sensor block. This allows the grease to flow in without pressurizing the sensor cavity. Pumping grease in the fitting without removing the pickup will build pressure in the cavity and may damage the shaft seals or the block isolation O-rings.

### **Frequency of Grease Installation**

The block cavity must be filled during initial assembly and installation of the motor. No more than annually, the pickup should be removed and additional grease pumped into the block to insure it is filled. End users must be informed and reminded that this is not a lubrication point and must not be included in lubrication schedules for bearings and other frequently-lubricated components.

## **MONROE TRUCK EQUIPMENT, INC. WARRANTY SNOW & ICE CONTROL PRODUCTS**

**Monroe Truck Equipment, Inc.** warrants to the original purchaser, that if any part of the product proves to be defective in workmanship or material within **ONE YEAR** of the original installation, and is returned to us within 30 days of the discovered defect, we will (at our option) repair or replace the defective part. This warranty does not apply to damage resulting from misuse, neglect, accident, improper installation, normal wear items or lack of maintenance. This warranty is exclusive and supersedes all other warranties, whether expressed or implied. **Monroe Truck Equipment, Inc.** neither assumes, nor authorizes anyone to assume for it, any other obligation or liability in connection with this warranty and will not be liable for consequential damages.

All engines, pumps, motors, cylinders and valves are warranted by their manufacturer and not by **Monroe Truck Equipment, Inc.**. The manufacturer's warranty will apply to these parts. Electrical and hydraulic components are not to be disassembled without the express written permission of Monroe Truck Equipment. Use of replacement parts other than original equipment voids this warranty.

All defective parts returned must be accompanied by the model number, serial number, date installed, date of defect, description of defect, and the name of the distributor from whom it was purchased. All warranty claims must have prior written approval from **Monroe Truck Equipment, Inc.**.

***Please return the warranty registration card that accompanies this manual to confirm receipt of this parts catalog and acknowledge the information contained within. Failure to return the attached card may result in a voided warranty.***

1051 West 7<sup>th</sup> Street  
Monroe, WI 53566

## Warranty Policy

### **Uninstalled Parts and Equipment Provided by Monroe Truck Equipment**

Monroe Truck Equipment will provide the following limited warranty for a period of one year to the original purchaser of all uninstalled goods provided by Monroe Truck Equipment:

**LIMITED WARRANTY:** All goods provided by Monroe Truck Equipment (MTE) will be free from defects in material and workmanship for a period of one year from the date of purchase by the original purchaser. This limited warranty shall be the sole and exclusive remedy for any such product found to be defective. This limited warranty supercedes all previous warranties and is exclusive and in lieu of all other warranties, whether expressed or implied.

This limited warranty applies only to parts or accessories manufactured by MTE and/or provided by same. Except with respect to title, this limited warranty does not pertain to parts or accessories not manufactured and/or provided by MTE, regardless of whether such parts or accessories were selected and/or recommended by MTE. MTE will, as a service to the buyer, pass on any warranties received from the original manufacturer of MTE provided parts and/or accessories.

MTE will not under any circumstances be liable for any incidental or consequential damages whether in tort, contract, or otherwise, for any bodily injury, death, property damage, loss of use, or loss of income resulting from or in any way arising out of any goods provided by MTE, or their sale, use, or manufacture.

Any warranty claim deemed to be arising from the result of misuse, abuse, neglect, accident, improper installation, lack of maintenance, act of war (whether declared or otherwise), or act of God will be denied. Any repair or modification by the buyer or any third party, without the prior written consent of MTE, will void any possible warranty compensation. Any damage deemed to be the result of abnormal operation will not be compensated by this warranty.

Normal or special maintenance items such as fuels, fluids, tires, belts, hoses, filters, air cleaners, light bulbs, and any other items subject to normal wear and tear that are supplied in connection with goods provided by MTE are not allowed under this warranty.

All engines, pumps, cylinders, valves, and motors are warranted by their manufacturer and not by Monroe Truck Equipment. The manufacturer's warranty will apply to these parts. Electrical and hydraulic components are not to be disassembled without the express written consent of MTE. Any disassembly of MTE provided components without prior authorization will void the applicable warranty.

Monroe Truck Equipment shall be the sole and final determining authority as it applies to the administration of this warranty policy. Purchaser acknowledges receipt of Monroe Truck Equipment Warranty Policy and agrees to be bound by same.

GLOBAL SOLUTIONS  
ARMORED VEHICLES ~ SPORT TRUCK CONVERSIONS  
MUNICIPAL SNOW & ICE CONTROL ~ FIRE APPARATUS  
PICKUP TRUCK ACCESSORIES ~ TRUCK EQUIPMENT/MODIFICATIONS

1051 West 7<sup>th</sup> Street  
Monroe, WI 53566  
608-328-8127 ~ Fax: 608-328-4278

Any and all warranty claims must be forwarded to MTE within 10 days of defect discovery. A copy of the original Monroe Truck Equipment invoice as well as the manufacturer's model number, serial number, and date of installation must accompany all correspondence regarding said claims. MTE will, at their option, choose whether to repair or replace the defective part unless otherwise specified by the original manufacturer of said part.

### **Procedures for Warranty Claims Notification**

For submission of any warranty claim please contact Monroe Truck Equipment – Warranty Department at 800-356-8134

The following documentation will be needed when you call for initial warranty authorization:

1. A copy of the original MTE invoice.
2. Make, Model, and VIN or Serial Number of the equipment involved.
3. Part number and serial number of the part in question.
4. A complete description of the problem.

The following must accompany any claim submitted to Monroe Truck Equipment:

1. Documented photographs of any physical damage.
2. Inspection notes by MTE personnel or MTE authorized 3<sup>rd</sup> party.
3. Authorization number issued by Monroe Truck Equipment – Warranty Department.

**Defective parts must be returned to Monroe Truck Equipment (freight prepaid) within 30 days of issuance of Authorization Number.**

**Monroe Truck Equipment reserves the right to void any warranty for failure to comply with Monroe Truck Equipment Warranty Policy.**

This policy is effective October 11, 2012
